DIGITAL LITERACY PORTFOLIO

PROJECT REPORT

Name: Kuldeep Singh Chouhan
Registration Number: 25BCE10539
Branch: CSE
Year: 1st Year
Course Code: CSE0001
Date: 31 March 2026

VIT BHOPAL UNIVERSITY
DIGITAL LITERACY

Introduction

In todays world it is really important for students like me to know how to use technology to talk work together and get better at our jobs.I was given a project to make a Digital Literacy Portfolio as part of being a Student Digital Ambassador.The goal was to try out online platforms learn how to be polite and respectful online and find out how to stay safe on the internet.

I did five tasks for this project.

1.I made an infographic to share information in a way.

2.I built a portfolio to show my work online.

3. I looked into coding platforms to see how they can help me learn skills.

4. I wrote emails to practice communicating with others online.

5. I studied cybercrime awareness to learn how to protect myself

These tasks taught me how to be careful and professional online use technology to get things done and avoid getting into trouble on the internet.This report is, about what I did what I learned and what I thought about each task.

Task 1: Digital Literacy Awareness Infographic

I made a digital infographic using Canva for this task. The infographic is about literacy. Digital literacy is important for students. It talks about internet practices and how to be professional online. It also talks about email etiquette.

I used pictures and short words to make the infographic easy to understand. Canva is a tool that helped me make it look good without needing to be a great designer. I did not need to know a lot about design to use Canva.

This task taught me how to show information in a way and how to get my ideas across. One hard part was picking the important things to put in the infographic. There was not a lot of space.. I figured it out by focusing on the key points and keeping it simple.

I learned a lot from this task. It helped me be more creative. Now I know how to tell people about literacy in a way that is fun and interesting. Digital literacy is important. I can spread the word, about it using infographics like this one.

Task 2: Student Digital Portfolio

I made my profiles on GitHub, LinkedIn and Kaggle. These are really platforms for students like me. They help me show what I can do the projects I have done and what I have achieved.

I did a things on GitHub. I made a profile that says who I am, what I study and when I will graduate. I also said that I want to learn more about programming and artificial intelligence. On LinkedIn I updated my education information. I added my degree, university. When I will finish my studies. I also looked at Kaggle. It is a place to practice data science and machine learning.

Each of these platforms is used for something. I use GitHub to share my code with others. I use LinkedIn to meet people who work in my field.. I use Kaggle to learn new things and take part in competitions. I will use these platforms a lot over the four years. I want to get better at what I do meet people and have more opportunities to get a good job.

Making these profiles was really helpful. I learned that it is very important to have an online presence. I need to keep my profiles professional and up, to date. GitHub, LinkedIn and Kaggle are tools for me to use. I will keep using them to improve my skills and my career.

Task 3: Coding & Collaboration Platforms

For this task, I explored coding platforms and collaboration tools. I created an account on HackerRank and completed a beginner-level problem to practice programming skills. This helped me understand how coding platforms work and how they improve problem-solving abilities.

Additionally, I created a Google Form as a Digital Literacy Quiz. The form included five questions, including multiple-choice and short-answer questions. This activity helped me understand how to create interactive content and collect responses effectively.

Coding platforms like HackerRank are useful for improving logical thinking and preparing for technical interviews. Google Forms is helpful for surveys, quizzes, and collaboration in academic work.

Through this task, I learned how to use digital tools for both learning and collaboration. It also improved my confidence in solving coding problems and creating useful online resources.

Task 4: Professional Email & Etiquette

In this task, I learned how to write professional emails and follow proper email etiquette. I wrote two emails: one requesting an assignment deadline extension and another expressing interest in a summer internship.

Both emails included a clear subject line, formal greeting, structured body, and a proper closing. I ensured that the tone was polite and professional.

Additionally, I created a checklist of social media do’s and don’ts. This included points such as maintaining privacy, avoiding offensive content, and being respectful online.

This task helped me understand the importance of clear communication in a professional environment. It also taught me how small details like tone and structure can make a big difference in communication.

Task 5: Cybercrime Awareness Case Study

For this task, I studied cybercrime, specifically phishing attacks. Phishing is a type of fraud where attackers try to steal sensitive information like passwords or bank details by pretending to be a trusted source.

I learned that phishing usually happens through fake emails, messages, or websites. Students and inexperienced users are often targeted. The consequences include financial loss and identity theft.

I also created a prevention checklist that includes tips such as not clicking on suspicious links, using strong passwords, enabling two-factor authentication, and reporting incidents on the National Cyber Crime Portal.

This task made me more aware of online threats and taught me how to stay safe in the digital world.

Conclusion :-

This project helped me gain valuable knowledge about digital literacy and its importance in today's world. I learned how to create professional profiles, communicate effectively, use online tools, and stay safe from cyber threats.

Each task contributed to improving my practical skills and awareness. I now feel more confident in using digital platforms responsibly and professionally. This project has prepared me to guide others as a Digital Ambassador and apply these skills in my academic and professional journey.
